

List of Future Enhancements

1. Add real-time traffic updates

Integrate live traffic data from the MapQuest API to adjust directions and estimated time of arrival dynamically.

2. Enable route customization

Allow users to avoid tolls, highways, or ferries through toggle options in the UI.

3. Add voice navigation support

Implement basic text-to-speech guidance for directions to improve accessibility.

4. Implement map zoom and pan controls

Enhance the map UI for better interactivity and usability.

5. Display points of interest (POIs)

Show nearby restaurants, ATMs, hospitals, and other important locations along the route.

6. Add save/load trip functionality

Allow users to save routes for future reference and reload them when needed.

7. Multi-stop routing support

Enable users to add multiple destinations in a single trip.

8. Provide estimated fuel cost

Calculate the estimated cost of the trip based on route distance and average fuel consumption.

9. Support for international locations

Ensure the interface handles global locations and different unit systems (miles/km, etc.).

10. Add user authentication and session saving

Let users log in and save their preferences, recent routes, and settings.
